

Problem Statement

This is the data of an Hr department where it stores the information of all the employees, the Hr wants to analyse certain aspects of this data.

Data Cleaning and Preparation

- Clean and prepare the data for analysis
- Merge DOJ and Employee table into one table

Make KPI

- Total numbers of employees
- Average age of an employee
- Average salary of an employee
- Total salary given by employer
- Average leave balance

Analysis

- Q1. Create age groups of Young (0-32), Elder (33-49) and Wise (above 50) as age category?
- Q2. Count how many employees are in each age category?
- Q3. Find gender wise average salary?
- Q4. Education wise avg. salary?
- Q5. Show Gender wise average leave balances whose salary is below 35k?
- Q6. Make Age group wise min, max and avg. salary table?
- Q7. Find the gender wise number of employee count and show them in percentage?
- Q8. Create a column for years of service using DOJ?
- Q9. Find how many employees has served for more than or equal to 5 years using calculate function?
- Q10. Find job title wise average salary using bar chart?
- Q11. From the total salary how much % is given to each job title show using table?
- Q12. Avg. salary by number of service year using line chart?
- Q13. Find Month wise number of hiring's?
- Q14. Find count of employees work under each job title?
- Q15. Create a final dashboard with all the important visualisations?
